

## How Clinical Templates Improve Billing and Save Time

When you partner with OP, you receive access to clinical templates that allow you to treat children like children, not “little adults.” By guiding you through several different types of encounters for the most common pediatric diagnoses, these templates provide a starting point for your documentation, while helping to ensure you don’t miss any key points. They can also be easily edited to personalize your notes.

For well care, the EHR has Bright Futures templates, which provide theory-based and evidence-driven guidance for all preventive care screenings and well visits from birth to age 21. Seen as the cornerstone of pediatrics, these templates can be used for disease detection, disease prevention, health promotion, and anticipatory guidance. Bright Futures templates are integrated within OP and help you improve the quality of care you provide to your patients.

When it comes to billing, the templates in OP allow you to add necessary CPT codes so you don’t miss any additional services, such as developmental screening and vision testing. It’s best if these templates align with the Bright Futures guidelines to avoid any unnecessary payment issues. This also ensures that you won’t need to manually add the CPT codes to each note, making documenting your time with a patient as easy as possible.

To save even more time on documentation, make sure you have a template for each of your top ten diagnosis codes. When you use the OP templates and follow our RCM tips, you’ll find charting and billing to be so much easier — giving you more time to focus on your patients and enjoy your work.
